PLANT TISSUE Sampling Guidelines

ASPARAGUS

Recommended timing

Optimum timing of asparagus plant tissue sampling is during mid-growth of the fern shortly following completion of harvest. However, samples may also be obtained from mature ferns, if desired.

Sampling

Select a 4 inch section from the tip of new fern branches. Approximately, 15-20 ferns should be sampled from representative plants in the sampling block.

Preferred analyses

Fern tips – Test code 1254.

Sample diagram not available.
